Bagaimana cara memberikan favicon?

```
<link rel="icon" type="image/x-icon" href="/favicon.ico" />
```

Mendeteksi dark mode

```
<script>
  if (window.matchMedia("(prefers-color-scheme: dark)").matches) {
    console.log("Hello dark mode!");
  } else {
    console.log("Hello light mode!");
  }
</script>
```

Buat favicon dynamic

```
const favicon = document.querySelector('link[rel="icon"]');
if (window.matchMedia("(prefers-color-scheme: dark)").matches) {
  favicon.href = "/favicon-dark.svg";
} else {
  console.log("Hello light mode!");
  favicon.href = "/favicon-light.svg";
}
```

Update icon ketika berganti dark-light mode

```
const favicon = document.querySelector('link[rel="icon"]');
window
  .matchMedia("(prefers-color-scheme: dark)")
  .addEventListener("change", () ⇒ {
    // update the icon from here
 });
```

BONUS

Otomatis ganti tanpa javascript!

```
<link href="favicon-dark.svg" rel="icon" media="(prefers-color-scheme: light)" />
<link href="favicon-light" rel="icon" media="(prefers-color-scheme: dark)" />
```

Note:
- Belum di support semua web browser, seperti firefox dan safari.
